

RequestsAndReports

Mostly we use either private mail - for general support - and experimental applications internally.

Since Jan. 2011 we have an issue tracker within the network. This was forgotten about, once the next version began to work. Since it's incompatible, the content should be moved to the new version asap.

the website

[report issue related to the website ball.askemos.org](#)

source code

[report issue with ball source code](#) -- system core, rscheme layer, chicken layer, setup; all mixed at this time.
